

Meanwhile in the world of morphology ...

A second opinion. In a second.

Even the most experienced laboratory technicians, like Mike, occasionally come across blood cells that are difficult to analyze and classify. Sometimes you just need help, a second opinion from a colleague or expert advice from another department. In the analogue world this is easier said than done. In Mike's case either the expert comes to the blood sample, or the sample goes to the expert. At best, you lose valuable time, at worst, you never get that second opinion at all.

In the digital world, things are very different. Using an existing network, slides needing a second opinion can be reviewed remotely by a morphology expert. Distances and geography are no longer a factor. For Digi, getting a second opinion in seconds is never a problem.
