

# CellaVision Environmental Policy

CellaVision aims to be a trusted provider of vitro diagnostic systems for analysis of blood, other body fluids and tissues. CellaVision commits to protecting the environment by responsibly managing resources, waste and transportation throughout the product life cycle, from hardware and software development, through manufacturing, sales and service, to decommissioning.

Cellavision shall:

- Prevent pollution and reduce environmental impact through sustainable and efficient use of energy, raw materials and other natural resources
- Minimize waste by promoting the use of recycled and environmentally preferable materials, where feasible
- Reduce climate impact through responsible selection of transport and logistics solutions
- Ensure awareness and competence in environmental matters among all employees
- Comply with applicable environmental laws, regulations and other binding requirements
- Continually improve the management system, including monitoring performance through internal audits

CellaVision considers the needs and expectations of relevant interested parties and fulfills stakeholder requirements through legal compliance and responsible environmental practices.

CellaVision strives to minimize its environmental impact throughout the value chain.
